Poultry Climate Controller

STM microcontroller and RS485-based poultry controller for accurate, reliable climate management.

Key Features

- 16 relay outputs to control fans, foggers, cooling pads, heaters, and more.
- RS485-based temperature & humidity sensor connection for long-distance accuracy.
- Microcontroller-based system for fast, stable, and reliable performance.
- Designed specially for poultry farms to maintain ideal climate conditions.
- Reduces manual errors and ensures consistent environment control.

Advantages & Benefits

- Improves flock growth performance and reduces bird stress.
- Sensors can be installed at long distances without data loss.
- Highly stable operation even under 24×7 continuous use.
- Simple, user-friendly interface suitable for farmers and staff.
- Enhances farm profitability with consistent climate management.
